## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 3/19/02 have been fully read and considered but they are not persuasive.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 6, 7 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Sun (5,969,764).

Regarding claim 6, Sun discloses an image decoding device which decodes an encoded bit stream formed by encoding images for each object, comprising:

display speed information decoding means for decoding object display speed information from said encoded bit stream, the display speed information indicating a number of objects displayed per a unit time (Note Sun teaches that multiple VO are present in a single frame col.8, lines 52-55 the number of which is shown in Table 5, see col.12 (note VO0-VO5 in Container-1). Since each frame has a specific rate (Table 4), Sun teaches for each frame (duration of  $1/\text{rate}$  which is a unit of time) will indicate the number of VOs.); and

control means for controlling the reconstruction of said encoded images encoded for each object, based on said decoded object display speed information (note Sun's figure 3 illustrates a control means or a rate control process with additional features for controlling the reconstruction of the encoded images for each object where the frameskip control uses the decoded object display speed data for preventing the overflow of data and improving smoothness of the displayed images).

Note claims 7 and 20 have similar corresponding elements.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sun (5,969,764) in view of Suzuki (6,031,575).

With regards to claims 8-11, Sun discloses the display speed information decoding means and control means. Sun does not disclose the decoded object display speed is fixed or variable. However, Suzuki teaches plural VOPs at different VOP rates, ie. display speed (col.47, ln.65 to col.48, ln.10). It is understood different rates have different time intervals. The fact that the time axis is graduated into different time intervals is based on the incoming VOP rates. It follows that Suzuki teaches variable VOP rates. It should also be understood that if the VOP rates are not changing, it is considered fixed. Thus, both fixed and variable display rates are met by Suzuki.
